

中華民國獸醫病理學會第 304 次組織病理研討會

Chinese Society for Veterinary Pathology

The Three-Hundred-fourth (304th) Histopathology Seminar

Date: Mar 4, 2011

Place: AHRI

Case 1. CSVP 2011-2629 (RBHIPW07-702, TACTRI, H.J. Lin, L.H. Chang, C.H. Yang)

Wistar rat, 15-week-old, male, was collected during the 2 months short-term triazole pesticide experiment.

Case 2. CSVP 2011-2630 (T556, NCYU, J.C. Wu, Z.J. Zheng, D.Y. Lo)

Canine, male, 8-year-old, showed clinical sign of intermittent hematuria. The mass was removed from urinary bladder.

Case 3. CSVP 2011-2631 (CO10-1036B, VTH, NCHU, J.P. Kao, C.C. Lin)

Formosan gem-faced civet (*Paguma larvata taiwan*), intact female, unknown age, BW 2.88Kg, showed poor spirit and appetite. An abdominal mass was found during physical examination.

Case 4. CSVP 2011-2632 (CO10-669-111, GIVP, NCHU, K.J. Yu, J.W. Liao)

ICR mouse, 8-week-old, male, showed signs of dullness, paleness, rough coat, and abdominal breathing. At necropsy, marked swelling and congestion with multiple hemorrhages in liver were noted.

Case 5. CSVP 2011-2633 (CS10-1239 NCHU, Y.Y. Liao, W.F. Chang)

Canine, dachshund, 12-year-old, intact male, has been observed with an appearance of a hard, hair-less, dark mass (4 ×3 ×2 cm) on the lateral aspect of left stifle joint for at least one year.

Case 6. CSVP 2011-2634 (CO10-948, NCHU, Y.S. Huang, C.C. Lin, W.F. Chang)

Tsaiya Ducks (菜鴨), 10-month-old, showed depressed and emaciation. Enlarged abdomen and hard foot pads with dark color were noted.

Case 7. CSVP 2011-2635 (CS10-0836D, GIVP, NCHU, Y.Y. Huang, T.Y. Ko, C.C. Lin)

Canine, German shepherd, intact female, 13-year-old. Jaundice, weight loss, and radiographic signs of hepatomegaly were noted clinically. Gross findings: multiple whit spots (0.5 to 3 cm) in liver and distended gall bladder filled with sludge but no biliary obstruction.
